Chiropractic Text Book - R. W. Stephenson 2015-07-24

A classic in the field, R.W. Stephenson's Chiropractic Text Book has come to be regarded as a bible among chiropractic practitioners. Endorsed enthusiastically upon its release by B.J. Palmer, who wrote that, "of all the books written and compiled on Chiropractic Philosophy, this is by far the best, not excepting my own." For in this milestone of a book, Stephenson laid out the entire philosophical foundation of chiropractic, identifying and illuminating a variety of principles still used widely today. Initially published in 1927 as an educational text for the classroom and reference resource for more experienced practitioners (who are, after all, always students), Chiropractic Text Book quickly became a staple in the chiropractic curriculum. Though chiropractors ought to look elsewhere for current standards of practice, this book contains a great deal of valuable theoretical context and history as Chiropractic Text Book is the first place many foundational chiropractic ideas were printed. For

instance, Stephenson's list of the 33 core chiropractic principles-in which he encapsulates Palmer's chiropractic philosophy - are still referenced by chiropractors today. For those interested in the practice, study, or history of chiropractic, this book will make a perfect addition to your library.

A Classification of Educational Subject Matter - W. Dale Chismore 1978

33 - David Serio 2017-11-21

The core elements of Chiropractic grew out of the thinking and philosophical concepts of D. D. Palmer, the founder of Chiropractic, and his son, B. J. Palmer. These principles were then compiled and transformed into thirty-three principles in R. W. Stephenson's groundbreaking textbook in 1927. These thirty-three principles offer a logical and deductive navigational process for locating, analyzing, and

correcting vertebral subluxation, but their value does not end there. As Chiropractor and international speaker Dr. David Serio reveals, the thirty-three principles of Chiropractic are at their essence a philosophy for life. In 33, Serio asks Doctors of Chiropractic from around the world to explain chiropractic principles to the public. You'll discover how the principles add clarity and insight to our daily lives and our understanding of the universe. Serio supports his interviewees' thoughts with inspirational quotations and his own insightful comments and practical tips. From the core concept of universal intelligence to time, physical laws, adaptation, and human consciousness, the thirty-three principles offer a road map for a healthy, productive life. Chiropractic students, doctors, and even those who are simply curious about the enduring truths in life and health will find 33 an absorbing, intriguing exploration into the core values of a fascinating discipline.

Andrew New York Times and Wall Street Journal Best-selling author of the Missed Fortune book series Quotes from the Book- School rarely prepares us completely for real life. The sting of that statement hits doctors harder than most. - Just as a house cannot stand without a strong foundation, the chiropractic office cannot long survive without a strong doctor/leader. They are the one who possesses the infectious personality, yet still manages to demand respect. - The principles that I cover are not only for chiropractors, but for anyone wishing to expand any business successfully. The principles that I talk about have aided veterinarians, massage therapists, and acupuncturists. - We are going through some tough times and we have to become stronger if we are to survive this new economy. - The first rule of business is that your business is not about you. It is not even about your product or service. It is about your customers. - Of all of the people whom I have helped grow over the years, I can say that my hardest battle has been teaching people the concept of change. Not only is change hard work, which brings out our essence of laziness, it also means admitting we were wrong -- and that can be ego shattering. - I believe it takes great courage to ask for help. To want a better life for their family and expose their office to me takes guts. - We all have a self-worth. Some of us believe that we are worth \$50,000 a year while others will settle for nothing less than \$5,000,000 a year. When we come close to breaking that barrier, we will generally do something to sabotage our growth. - I can come into his or her office and

give a 50% increase in patient volume and a 100% increase in collections.

Technic and Practice of Chiropractic - Joy Maxwell Loban 2019-06-04 No two students, approaching for the first time the study of Chiropractic, approach from the same angle. Their viewpoints differ. In order that all may gain as nearly as possible the same viewpoint from which to consider in turn the sections of this book, it will be well if each student reads the entire book before beginning to memorize its parts and convert them into practical working knowledge. An effort should be made, abandoning all other, to acquire the Chiropractic viewpoint. This accomplished, the rest of the task requires time and patience alone, without waste labor. The section on Vertebral Palpation should be studied step by step, the study of each step being combined with practice in it. Likewise the section on Nerve-Tracing, theory preceding practice. The study of the Technic of Adjusting should occupy those months immediately preceding the commencement of actual adjusting practice and continue during such practice. The chapters on Practice are intended for the student about to enter the field. The table of Spino-Organic Connection can be best understood by those who have studied or are studying the anatomy and physiology of the nervous system. Let every page be studied with a good medical dictionary open at the elbow of the reader. Pass no word without comprehension, no detail without mastery. He who would seek to modify the life processes of the human body must fortify himself against fatal error with every bit of knowledge he can acquire.

The context of natural forest management and FSC certification in Brazil - Claudia Romero 2015-12-30

Management decisions on appropriate practices and policies regarding tropical forests often need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at different scales and how they varied through time in response to policy and other processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with stakeholder input, which focuses on FSC certification of natural tropical forests. More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy effects that FSC certification of natural forest has had in Brazil as well as in other tropical countries. The contents of this volume highlight the opportunities and

constraints that those responsible for managing natural forests for timber production have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.

This is a medical study, focusing on the human spine and neurology. This

book believes that the vertebral body palpation part should be step by step, and each step of learning and practice should be combined. Similarly, with regard to neural tracking, theory precedes practice. Research on adjustment techniques should be carried out within a few months before the actual adjustment practice begins and continue during this period.
