Informal Labor, Formal Politics, and Dignified Discontent in India - Rina Agarwala 2013-04-08
Since the 1980s, the world's governments have decreased state welfare and thus

increased the number of unprotected 'informal' or 'precarious' workers. As a result, more and more workers do not receive secure wages or benefits from either employers or the state. This book offers a

fresh and provocative look into the alternative social movements informal workers in India are launching. It also offers a unique analysis of the conditions under which these movements succeed or fail. Drawing from 300 interviews with informal workers, government officials and union leaders, Rina Agarwala argues that Indian informal workers are using their power as voters to demand welfare benefits from the state, rather than demanding traditional work benefits from employers. In addition, they are organizing at the neighborhood level, rather than the shop floor, and appealing to 'citizenship', rather than labor rights.

Challenges and Opportunities of Circular Economy in Agri-Food

Sector - Rahul S Mor

2021-09-14

Global population by 2050 is predicted to be over 9 billion and accordingly, the production systems will demolish about 140 billion tons per year of minerals, ores, fossil fuels and biomass, i.e.,

thrice of the current need, and the food production itself has to be doubled. Optimized resource usage, lifecycle management, and reduced carbon emission have become a priority for agri-food businesses today, and circular economy (CE) helps for a sustainable and flexible way to grow without exhausting primary materials, and it thinks beyond recycling and resource usage. The word CE best relates to the resource and efficiency management, 6Rs, closed-loop production systems, zero waste and lifecycle engineering, reduced overconsumption of resources and waste generation, enriched system redesign and business model innovation, thereby leading to sustainable development goals. In this light, the book calls for theoretical and empirically sound contributions that are focused on the different aspects of the circular economy, 6R's, sustainable production and consumption, closed-loop systems, etc. in the agri-food sector.

**International Economics,
Second Edition** - Paul Torelli
2017-05-23

Today's news media displays an intense fascination with the global economy—and for good reason. The degree of worldwide economic integration is unprecedented. Rising globalization has lifted living standards and reduced poverty, while foreign markets and new technologies continue to present opportunities for entrepreneurs and corporations. Still, economic shocks can spread across the world in minutes, impacting billions of lives. The political framework supporting globalization is now under scrutiny, and recent elections suggest economic policies may be readjusted in the coming years. This book will help you learn about economics in everyday language, using little or no math, giving you better tools to interpret current events as well as long-term economic and political developments. Modern economics offers a powerful framework for understanding

globalization, international trade, and economic growth. You may possess years of hands-on experience dealing with business cycles and foreign competitive pressures, but lack a solid grounding in economic concepts that shed light on the forces of globalization. This book is here to help.

Practical Research - Paul D. Leedy
2013-07-30

For undergraduate or graduate courses that include planning, conducting, and evaluating research. A do-it-yourself, understand-it-yourself manual designed to help students understand the fundamental structure of research and the methodical process that leads to valid, reliable results. Written in uncommonly engaging and elegant prose, this text guides the reader, step-by-step, from the selection of a problem, through the process of conducting authentic research, to the preparation of a completed report, with practical suggestions based on a solid theoretical framework and

sound pedagogy. Suitable as the core text in any introductory research course or even for self-instruction, this text will show students two things: 1) that quality research demands planning and design; and, 2) how their own research projects can be executed effectively and professionally.

5th International Conference on Biomedical Engineering in Vietnam - Vo Van Toi 2014-11-18

This volume presents the proceedings of the Fifth International Conference on the Development of Biomedical Engineering in Vietnam which was held from June 16-18, 2014 in Ho Chi Minh City. The volume reflects the progress of Biomedical Engineering and discusses problems and solutions. I aims identifying new challenges, and shaping future directions for research in biomedical engineering fields including medical instrumentation, bioinformatics, biomechanics,

medical imaging, drug delivery therapy, regenerative medicine and entrepreneurship in medical devices.

Beyond Smart and Connected Governments - J. Ramon Gil-Garcia 2020-03-06

This book provides a comprehensive introduction to the study of sensors and the Internet of Things (IoT) from a government and public policy perspective. Since 2011, federal spending on IoT has been growing at a compound annual rate of ten percent. New technologies, such as

sensors, and new kinds of data, such as big data, are creating new ways to systematically capture data and to use it to respond to complex problems. Some of these new technologies and applications have been identified and studied in recent literature in terms of their relevance to government. This volume adds to the literature by presenting sound theories and concepts for understanding the opportunities and challenges governments face when seeking to improve public services and government operations through the use of IoT. It also includes innovative methodologies for building understanding of the potential of a smart and connected government. In addition, the book offers relevant case studies and practical recommendations for the development, management, and evaluation of public policies and government programs.

Mathematics for Machine Learning - Marc Peter Deisenroth 2020-04-23

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods

help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

A Field of One's Own - Bina Agarwal 1994

This is the first major study of gender and property in South Asia. In a pioneering and comprehensive analysis Bina Agarwal argues that the single most important economic factor affecting women's situation is the gender gap in command over property. In rural South Asia, the most significant form of property is arable land, a critical determinant of economic well-being, social status, and empowerment. But few women own land; fewer control it. Drawing on a vast range of interdisciplinary sources and her own field research, and tracing regional variations across five countries, the author investigates the complex barriers to women's

land ownership and control, and how they might be overcome. The book makes significant and original contributions to theory and policy concerning land reforms, 'bargaining' and gender relations, women's status, and the nature of resistance.

Analysis and Performance of Fiber Composites - Bhagwan D. Agarwal 1990-10-08

Having fully established themselves as workable engineering materials, composite materials are now increasingly commonplace around the world. Serves as both a text and reference guide to the behavior of composite materials in different engineering applications. Revised for this Second Edition, the text includes a

general discussion of composites as material, practical aspects of design and performance, and further analysis that will be helpful to those engaged in research on composites. Each chapter closes with references for further reading and a set of problems that will be useful in developing a better understanding of the subject.

In Indian context.

International Human Rights Law in a Global Context - Felipe Gómez Isa 2009-01-01

The international human rights system remains as dynamic as ever. If at the end of the last century there was a sense that the normative and institutional development of the system had been completed and that the emphasis should shift to issues of implementation, nothing of the sort occurred. Even over the last few years significant changes happened, as this book amply demonstrates. We hope that this Manual makes a contribution to the

development of International Human Rights Law and is of interest for those working in the field of promotion and protection of human rights. The book is the result of a joint project under the auspices of HumanitarianNet, a Thematic Network led by the University of Deusto, and the European Inter-University Centre for Human Rights and Democratisation (EIUC, Venice).

Fundamentals of Mathematical Statistics - S.C. Gupta 2020-09-10
Knowledge updating is a never-ending process and so should be the revision of an effective textbook. The book originally written fifty years ago has, during the intervening period, been revised and reprinted several times. The authors have, however, been thinking,

for the last few years that the book needed not only a thorough revision but rather a substantial rewriting. They now take great pleasure in presenting to the readers the twelfth, thoroughly revised and enlarged, Golden Jubilee edition of the book. The subject-matter in the entire book has been re-written in the light of numerous criticisms and suggestions received from the users of the earlier editions in India and abroad. The basis of this revision has been the emergence of new literature on the subject, the constructive feedback from students and teaching fraternity, as well as those changes that have been made in the syllabi and/or the pattern of examination papers of numerous universities. Responding to Massification

- Philip G. Altbach 2017-08-26
Global massification of postsecondary education, with more than 200 million students studying at an untold number of institutions focusing on every specialization possible, necessitates a differentiated system of postsecondary education in every country. This book provides the first comparative study of how postsecondary education has evolved in 13 countries. The study offers an analysis of current global realities and how different nations have constructed their response. Our research shows that few countries have developed rational and differentiated academic systems to meet new realities. The book provides insights regarding useful approaches for the

development of academic systems. The book reveals similarities and differences in the 13 case studies as different governments have expanded postsecondary education to respond to the massification of enrollment. Postsecondary education has become diversified, but for the most part not adequately differentiated in most countries. Several of the case studies underscore the challenge of sustaining differentiation within the system if credentials from non-university, postsecondary institutions are considered of lesser social status. Too often institutions that successfully address the practical needs of national economies are ultimately merged into the university system. There is an urgent need for the planning and structuring of coherent systems of postsecondary education to serve the increasingly diverse clientele in need of the skills required by the knowledge economy. This study is the first global analysis aimed at understanding how

post-secondary education can be organized to meet society's requirements and points to the need for designing coherent academic systems.

**Principles of Accounting
Volume 2 - Managerial
Accounting** - Mitchell Franklin
2019-02-14

A less-expensive grayscale paperback version is available. Search for ISBN 9781680922936. Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed

examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.

**International Arbitration:
Law and Practice** - Gary B.
Born 2021-06-07

International Arbitration: Law and Practice (Third Edition) provides comprehensive and authoritative coverage of the basic principles and legal doctrines, and the practice, of international arbitration. The book contains a systematic, but concise, treatment of all aspects of the arbitral process, including international arbitration agreements, international arbitral proceedings and international arbitral awards. The Third Edition guides both students and practitioners through the

entire arbitral process, beginning with drafting, enforcing and interpreting international arbitration agreements, to selecting arbitrators and conducting arbitral proceedings, to recognizing, enforcing and seeking to annul arbitral awards. The book is written in clear, accessible language, suited for both law students and non-specialist practitioners, as well as more experienced readers. This highly regarded work addresses both international commercial arbitration and the related fields of investment and state-to-state arbitration and is essential reading for any student of international arbitration and any practitioner seeking a complete introduction to the field. The Third Edition has been comprehensively updated to include recent legislative amendments, judicial decisions and arbitral awards. Among other things, the book provides detailed treatment of the New York Convention, the UNCITRAL Model Law on

International Commercial Arbitration, all leading institutional arbitration rules (including ICC, SIAC, LCIA, AAA and others), the ICSID Convention and ICSID Arbitration Rules, and judicial decisions from leading jurisdictions. The Third Edition is integrated with the author's classic International Commercial Arbitration and with the online Born International Arbitration Lectures, enabling students, teachers and practitioners to explore particular topics in more detail. About the Author: Gary B. Born is the world's leading authority on international arbitration and litigation. He has practiced extensively in both fields in Europe, the United States, Asia and elsewhere. He is the author of International Commercial Arbitration (Kluwer Law International 3rd ed. 2021), International Arbitration and Forum Selection Agreements: Drafting and Enforcing (Kluwer Law International 6th ed. 2021), International Commercial

Arbitration: Cases and Materials (Aspen 3rd ed. 2021) and International Civil Litigation in United States Courts (Aspen 6th ed. 2018).

Democracy, Politics & Governance - A. Surya Prakash 2021-11-29

This book is a collection of articles published by the author over a period of time. Much of his writing reflects the social, political and economic issues that have emerged over the years and impacted India's politics and governance. Given his special interest in the working of the constitution, and the march of democracy since independence, the book contains chapters which specifically deal with constitutional issues, the working of parliament, the system of justice, the executive and the media. The author feels that negating the facts of history has been a major pastime of the Nehruvian and Marxist schools and that the

distortions introduced by these schools need to be challenged and corrected in the current phase of national politics. This is reflected in his articles which deal with the running secular versus pseudo-secular debate as also the political battles being fought on what is 'national' and what is 'anti-national'. In any case, whatever the issue and however intense the debate, he is firmly of the view that it must all happen within the parameters of the constitution.

International Tables for Crystallography, Volume C - E. Prince 2004-01-31

International Tables for Crystallography are no longer available for purchase from Springer. For further information please contact Wiley Inc. (follow the link on the right hand side of this page). The purpose of Volume C is to provide the mathematical, physical and chemical information needed for experimental studies in structural crystallography. The volume covers all aspects of experimental techniques, using all three principal radiation types, from the selection and mounting of crystals and production of radiation, through data collection and analysis, to interpretation of results. As such, it is an essential source of information for all workers using crystallographic techniques in physics, chemistry, metallurgy, earth sciences and molecular biology.

Company Law Procedures - Bloomsbury Publishing 2021-11-20

A Corporate Professional is required to equip himself with regard to corporate compliances on day- to-day basis. There are number of compliances which are required to be complied with depending on the event , whether it is incorporation / conversion / change , etc., not only from Company Law point of view but also from SEBI Regulations point of view (in case of a listed company). To assist the professional in this endeavour, this book is yet another attempt to provide all related procedures at one place along with the resolutions to make it handy and easy to use. The Book has been divided into two parts. Division-I contains Company Law Procedures of more than 115 events. Each procedure has been divided into following heads: -
Applicable Section of the Companies Act, 2013 -
Applicable Company Rule -
Applicable Regulation in case of listed company - SEBI

(Listing Obligations and Disclosure Requirements) Regulations, 2015 - Synopsis (giving background of the section of the Companies Act, 2013) - Procedure (step by step, including various Government approvals and filing of Forms, etc.) - Compliance by a listed company in accordance with SEBI (LODR) Regulations, 2015 - Draft Board resolutions - Draft General Meeting resolutions (Special/Ordinary resolution) Division-II contains updated Company Rules as issued by the Ministry of Corporate Affairs from time to time and which are referred under various procedures of the Book.

500 Examples and Problems of Applied Differential Equations -

Ravi P. Agarwal 2021-01-21

This book highlights an unprecedented number of real-life applications of differential equations together with the underlying theory and techniques. The problems and examples presented here touch on key topics in the discipline, including first order (linear and

nonlinear) differential equations, second (and higher) order differential equations, first order differential systems, the Runge-Kutta method, and nonlinear boundary value problems. Applications include growth of bacterial colonies, commodity prices, suspension bridges, spreading rumors, modeling the shape of a tsunami, planetary motion, quantum mechanics, circulation of blood in blood vessels, price-demand-supply relations, predator-prey relations, and many more. Upper undergraduate and graduate students in Mathematics, Physics and Engineering will find this volume particularly useful, both for independent study and as supplementary reading.

While many problems can be solved at the undergraduate level, a number of challenging real-life applications have also been included as a way to motivate further research in this vast and fascinating field.
