Word Problems-Detailed Explanations of Reasoning and Solving Strategies - Bill S. Lee  
2013-12

This is the workbook of the twelfth volume of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you will need to solve word problems. Sample question in this volume: Peter has read 120 pages of a book that he has just borrowed from the library. If the number of pages he has read is  $\frac{2}{5}$  less than the number of pages he has not read yet, how many pages does the book have? Reasoning and solution: From “the number of pages he has read is  $\frac{2}{5}$  less than the number of pages he has not read yet”, we know that the number of pages he has not read yet ( the noun phrase after the word “than”) is the amount in 1 whole and the number of pages he has read is in a fractional part that is  $\frac{2}{5}$  less than the fractional part the number of pages he has not read yet is in, 1, so the number of pages he has read is in a fractional part that is  $\frac{2}{5}$  less than 1 or is  $(1-\frac{2}{5})$  or is  $\frac{3}{5}$  of 1 whole. He has read

120 pages so we divide  $\frac{3}{5}$  into the amount in it, 120, to find the amount in 1 whole, the number of pages he has not read yet:  $120 \div \frac{3}{5} = 120 \times \frac{5}{3} = 200$  pages. The number of pages that he has not read is 200 pages. ...The techniques and strategies on using algebraic equations to solve word problems and on solving proportions, surface area, volume and area of lateral surface of cylinders and cones are also reviewed in the book. This book also reviews on using one set of 3 elements formulas and 2 sets of 3 elements formulas to solve whole number word problems, decimal word problems and fraction word problems. Detailed explanations of the reasoning and solving strategies for each and every problem are given in the answer key.

*Mathematics for Elementary School Teachers: A Process Approach* - Mark A. Freitag 2013-01-01  
 Freitag's MATHEMATICS FOR ELEMENTARY SCHOOL TEACHERS: A PROCESS APPROACH was developed using the five Content Standards from the NCTM Principles and Standards for School Mathematics, and the Common Core State Standards for Mathematics. Traditionally, books for pre-service elementary teachers have focused on problem solving. However, problem solving is not the only process through which mathematics is learned. It is also learned through mathematical reasoning, communication, representation, and connections. Recent trends in mathematics education now advocate implementing all five processes as a vital part of learning and doing mathematics. Consequently, you need to have concrete experiences with these processes that you will be required to teach. The goal of this book is to treat each of the processes equitably by using an approach in which the five processes serve as the central pedagogical theme. Most of the examples, exercises, and activities are designed to either model the processes or to directly engage you in working with them. As a result, you will not only come to understand the different processes, but also appreciate them as an integral to learning and doing mathematics. If this broader view can be instilled, you are more likely to give your students a more well-rounded and holistic view of mathematics once you enter the classroom. The content of the book is directly related to the mathematics that is taught in grades K - 8. The purpose is not to reteach elementary mathematics. Rather, the intent is to look at the content from a theoretical or generalized point of view, so that you can better understand the concepts and processes behind the mathematics you will teach. In short, the book focuses on the why behind the mathematics in addition to the how. Available with InfoTrac Student Collections <http://gocengage.com/infotrac>. Prealgebra - Lynn Marecek 2015-09-25  
 "Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the

fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

**CARPS** - Eugene Charniak 1968  
 CARPS (Calculus Rate Problem Solver) is a program written to solve calculus word problems, but is restricted to rate problems. The overall plan of the program is similar to Bobrow's STUDENT, the primary difference being the introduction of 'structures' as the internal model in CARPS. Structures are stored internally as trees. Each structure is designed to hold the information gathered about one object. A description of CARPS is given by working through two problems, one in great detail. Also included is a critical analysis of STUDENT. (Author).
