**At the doors of lexical
access: The importance of
the first 250 milliseconds in
reading** - Jon Andoni
Dunabeitia 2014-09-30
Correct word identification and

processing is a prerequisite for accurate reading, and decades of psycholinguistic and neuroscientific research have shown that the magical moments of visual word recognition are short-lived and markedly fast. The time window in which a given letter string passes from being a mere sequence of printed curves and strokes to acquiring the word status takes around one third of a second. In a few hundred milliseconds, a skilled reader recognizes an isolated word and carries out a number of underlying processes, such as the encoding of letter position and letter identity, and lexico-semantic information retrieval. However, the precise manner (and order) in which these processes occur (or co-occur) is a matter of contention subject to empirical research. There's no agreement regarding the precise timing of some of the essential processes that guide visual word processing, such as precise letter identification, letter position assignment or sub-word unit processing (bigrams,

trigrams, syllables, morphemes), among others. Which is the sequence of processes that lead to lexical access? How do these and other processes interact with each other during the early moments of word processing? Do these processes occur in a serial fashion or do they take place in parallel? Are these processes subject to mutual interaction principles? Is feedback allowed for within the earliest stages of word identification? And ultimately, when does the reader's brain effectively identify a given word? A vast number of questions remain open, and this Research Topic will cover some of them, giving the readership the opportunity to understand how the scientific community faces the problem of modeling the early stages of word identification according to the latest neuroscientific findings. The present Research Topic aimed to combine recent experimental evidence on early word processing from different techniques together with comprehensive reviews of the

current work directions, in order to create a landmark forum in which experts in the field defined the state of the art and future directions. We were willing to receive submissions of empirical as well as theoretical and review articles based on different computational and neuroscience-oriented methodologies. We especially encouraged researchers primarily using electrophysiological or magnetoencephalographic techniques as well as eye-tracking to participate, given that these techniques provide us with the opportunity to uncover the mysteries of lexical access allowing for a fine-grained time-course analysis. The main focus of interest concerned the processes that are held within the initial 250-300 milliseconds after word presentation, covering areas that link basic visuo-attentional systems with linguistic mechanisms.

Power and Pleasure - Hugh M. Thomas 2020-11-19

Although King John is remembered for his political and military failures, he also resided over a magnificent court. *Power and Pleasure* reconstructs life at the court of King John and explores how his court produced both pleasure and soft power. Much work exists on courts of the late medieval and early modern periods, but the jump in record keeping under John allows a detailed reconstruction of court life for an earlier period. *Power and Pleasure: Court Life under King John, 1199-1216* examines the many facets of John's court, exploring hunting, feasting, castles, landscapes, material luxury, chivalry, sexual coercion, and religious activities. It explains how John mishandled his use of soft power, just as he failed to exploit his financial and military advantages, and why he received so little political benefit from his magnificent court. John's court is viewed in

comparison to other courts of the time, and in previous and subsequent centuries.

Sensory and Consumer Research in Food Product Design and Development -

Howard R. Moskowitz
2012-04-03

During the past thirty years, companies have recognized the consumer as the key driver for business and product success. This recognition has, in turn, generated its own drivers: sensory analysis and marketing research, leading first to a culture promoting the expert and then evolving into the systematic acquisition of consumer-relevant information to build businesses. *Sensory and Consumer Research in Food Product Design and Development* is the first book to present, from the business viewpoint, the critical issues faced by business leaders from both the research development and business development perspective. This popular volume, now in an updated and expanded second edition, presents a unique perspective afforded by the author team of

Moskowitz, Beckley, and Resurreccion: three leading practitioners in the field who each possess both academic and business acumen. Newcomers to the field will be introduced to systematic experimentation at the very early stages, to newly emerging methods for data acquisition/knowledge development, and to points of view employed by successful food and beverage companies. The advanced reader will find new ideas, backed up by illustrative case histories, to provide another perspective on commonly encountered problems and their practical solutions. This book is aimed at professionals in all sectors of the food and beverage industry. *Sensory and Consumer Research in Food Product Design and Development* is especially important for those business and research professionals involved in the early stages of product development, where business opportunity is often the greatest.

Words Over War - Melanie Greenberg 2000-01-12

The international community can creatively and aggressively address deadly conflict through mediation, arbitration, and the development of international institutions to promote reconciliation. The editors of this book designed a systematic framework with which contributors compare third party intervention in twelve conflicts of the post-Cold War period. They examine the role of international organizations-the United Nations, international development banks, and international law institutions-and they analyze the tools and forms of leverage in successful and unsuccessful mediations.

Slocum #400 - Jake Logan
2012-05-29

Slocum takes on some cowardly braves... There's only one thing more vicious than the west Texas wind as it blows through Palo Duro Canyon—and that's a band of bloodthirsty Kiowa. Answering a woman's call for help, Slocum comes across the scene of a brutal ambush. Two men are dead, and three women have been abducted. Turns out the Indians are working with a scoundrel named Scudder, who

aims to turn the women into prostitutes. There's only one man who can save the ladies from a fate worse than death—and his name is John Slocum.
