*Social Movements Solidarity Structureshb* - Haris Malamidis 2020-10  
Social Movements and Solidarity Structures in Crisis-Ridden Greece explores the rich grassroots experience of social movements in Greece between 2008 and 2016. The harsh conditions of austerity triggered the rise of vibrant mobilizations that went hand-in-hand with the emergence of numerous solidarity structures, providing unofficial welfare services to the suffering population. Based on qualitative field research conducted in more than 50 social movement organizations in Greece's two major cities, the book offers an in-depth analysis of the contentious mechanisms that led to the development of such solidarity initiatives. By analyzing the organizational structure, resources and identity of markets without middlemen, social and collective kitchens, organizations distributing food parcels, social clinics and self-managed cooperatives, this study explains the enlargement of boundaries of collective action in times of crisis.

*Proceedings of the 13th International Scientific Conference* - Eugeniusz Rusiński 2017-03-27  
These proceedings of the 13th International Conference on Computer Aided Engineering present selected papers from the event, which was held in Polanica Zdrój, Poland, from June 22 to 25, 2016. The contributions are organized according to thematic sections on the design and manufacture of machines and technical systems; durability prediction; repairs and retrofitting of power equipment; strength and thermodynamic analyses for power equipment; design and calculation of various types of load-carrying structures; numerical methods for dimensioning materials handling; and long-distance transport equipment. The conference and its proceedings offer a major interdisciplinary forum for researchers and engineers to present the most innovative studies and advances in this dynamic field.

Drug-Membrane Interactions - Joachim K. Seydel 2009-07-10

Barrier, reservoir, target site - those are but some of the possible functions of biological lipid membranes in the complex interplay of drugs with the organism. A detailed knowledge of lipid membranes and of the various modes of drug-membrane interaction is therefore the prerequisite for a better understanding of drug action. Many of today's pharmaceuticals are amphiphilic or catamphiphilic, enabling them to

interact with biological membranes. Crucial membrane properties are surveyed and techniques to elucidate drug-membrane interactions presented, including computer-aided predictions. Effects of membrane interaction on drug action and drug distribution are discussed, and numerous examples are given. This unique reference volume builds on the authors' long experience in the study of drug-membrane interaction. Recommended reading for everyone involved in pharmaceutical research.

*Structure and Function of Invertebrate Oxygen Carriers* - Serge N. Vinogradov 2012-12-06

Oxygen binding proteins are large multi unit proteins ideally suited for the study of structure function relationships in biological molecules. This book, based on a Symposium at the Xth International Biophysics Congress in 1990, provides a synthesis of recent advances in our knowledge of invertebrate oxygen carriers such as hemoglobins, hemocyanins, and hemerythrins. Comprehensive reviews are combined with new research results of importance to all biochemists and molecular biologists interested in oxygen carriers in general, their gene structure and comparative biochemistry. Of particular value are the studies of invertebrate oxygen binding proteins which perform their function and have structures vastly different from the vertebrate hemoglobins and myoglobins, as well as numerous examples of modern molecular techniques as applied to research on this diverse group of proteins.

**Transition Curves for Highway Geometric Design** - Andrzej Kobryń 2017-02-22

This book provides concise descriptions of the various solutions of transition curves, which can be used in geometric design of roads and highways. It presents mathematical methods and curvature functions for defining transition curves.

[Handbook of Polish, Czech, and Slovak Holocaust Fiction](#) - Elisa-Maria Hiemer 2021-06-21

The Handbook of Polish, Czech, and Slovak

Holocaust Fiction aims to increase the visibility and show the versatility of works from East-Central European countries. It is the first encyclopedic work to bridge the gap between the literary production of countries that are considered to be main sites of the Holocaust and their recognition in international academic and public discourse. It contains over 100 entries offering not only facts about the content and motifs but also pointing out the characteristic fictional features of each work and its meaning for academic discourse and wider reception in the country of origin and abroad. The publication will appeal to the academic and broader public interested in the representation of the Holocaust, anti-Semitism, and World War II in literature and the arts. Besides prose, it also considers poetry and theatrical plays from 1943 through 2018. An introduction to the historical events and cultural developments in Poland, Czechoslovakia, Czech, and Slovak Republic, and their impact on the artistic output helps to contextualise the motif changes and fictional strategies that authors have been applying for decades. The publication is the result of long-term scholarly cooperation of specialists from four countries and several dozen academic centres.

**Membrane Proteins in Aqueous Solutions** - Jean-Luc Popot 2018-06-08

This book is the first to be entirely devoted to the challenging art of handling membrane proteins out of their natural environment, a key process in biological and pharmaceutical research, but one plagued with difficulties and pitfalls. Written by one of the foremost experts in the field, Membrane Proteins in Aqueous Solutions is accessible to any member of a membrane biology laboratory. After presenting the structure, functions, dynamics, synthesis, natural environment and lipid interactions of membrane proteins, the author discusses the principles of extracting them with detergents, the mechanisms of detergent-induced destabilization, countermeasures, and recent progress in developing detergents with weaker denaturing properties. Non-conventional alternatives to detergents, including bicelles,

nanodiscs, amphipathic peptides, fluorinated surfactants and amphipols, are described, and their relative advantages and drawbacks are compared. The synthesis and solution properties of the various types of amphipols are presented, as well as the formation and properties of membrane protein/amphipol complexes and the transfer of amphipol-trapped proteins to detergents, nanodiscs, lipidic mesophases, or living cells. The final chapters of the book deal with applications: membrane protein in vitro folding and cell-free expression, solution studies, NMR, crystallography, electron microscopy, mass spectrometry, amphipol-mediated immobilization of membrane proteins, and biomedical applications. Important features of the book include introductory sections describing foundations as well as the state-of-the-art for each of the biophysical techniques discussed, and topical tables which organize a widely dispersed literature. Boxes and annexes throughout the book explain technical aspects, and twelve detailed experimental protocols, ranging from in vitro folding of membrane proteins to single-particle electron cryomicroscopy, have been contributed by and commented on by experienced users. Membrane Proteins in Aqueous Solutions offers a concise, accessible introduction to membrane protein biochemistry and biophysics, as well as comprehensive coverage of the properties and uses of conventional and non-conventional surfactants. It will be useful both in basic and applied research laboratories and as a teaching aid for students, instructors, researchers, and professionals within the field.

**Seeking Peace in the Wake of War** - Stefan-Ludwig Hoffmann 2015

When World War II ended, Europe was in ruins. Yet politically and socially, the years between 1943 and 1947 were a time of dramatic reconfigurations that proved to be foundational for the making of today's Europe. This volume homes in on the crucial period from the beginning of the end of Nazi rule to the advent of the Cold War. It demonstrates how the everyday experiences of Europeans during these five years shaped the transition of their societies from war to peace. The essays explore these reconfigurations on different scales and levels with the purpose of enhancing our

understanding of how wars end.

**Lipid Domains** - 2015-06-08

Current Topics in Membranes is targeted toward scientists and researchers in biochemistry and molecular and cellular biology, providing the necessary membrane research to assist them in discovering the current state of a particular field and in learning where that field is heading. This volume offers an up to date presentation of current knowledge in the field of Lipid Domains. Written by leading experts Contains original material, both textual and illustrative, that should become a very relevant reference material The material is presented in a very comprehensive manner Both researchers in the field and general readers should find relevant and up-to-date information

**The Artist's Novel: A New Medium** - David Maroto 2020

Why do artists write novels? What impact does the artist's novel have on the visual arts? How should such a novel be experienced? In recent years, there has been a proliferation of visual artists who create novels as part of their broader art practice. They do so in order to address artistic issues by means of novelistic devices, favoring a sort of art predicated on process and subjectivity, introducing notions such as fiction, narrative, and imagination. In this sense, it is possible to see the novel as a new medium in the visual arts; yet very little is known about it. This two-volume publication is the first to explore in depth the subject of the artist's novel.00Part 1, 'A New Medium', is a theoretical examination that looks critically at the different ways contemporary artists employ the artist's novel, focusing mainly on four key case studies: Benjamin Seror's 'Mime Radio', Cally Spooner's 'Collapsing in Parts', Mai-Thu Perret's 'The Crystal Frontier', and Goldin+Senneby's 'Headless'. It seeks to situate the artist's novel within the broader context of the visual arts in the hopes of sparking a much-needed discussion about a practice that has long been ignored by critical strands in art discourse. It includes valuable resources, such as the only existing bibliography of artists' novels.00Published with Part 2: 'The Fantasy of the Novel'(ISBN 9788867494255) as a two-volume publication.

**New Approaches to Theatre Studies and  
Performance Analysis** - Günter Berghaus  
2001-01-01

This volume gathers 16 papers originally written for the occasion of the 49th Colston Symposium, held in Bristol in 1997, and substantially revised for this publication. They reflect on some of the key developments in the discipline of Theatre Studies over the past fifty years and combine this with a discussion of new trends and approaches, especially in the fields of Performance Studies, reception analysis, interculturalism, sociocultural analysis, theatre anthropology, dance and movement analysis, computer-assisted reconstruction of performance venues, street theatre, guerilla theatre, ritual theatre, etc.

Ultraviolet Light in Human Health, Diseases and Environment - Shamim I. Ahmad 2017-11-08

This book is about the roles and importance of Ultraviolet (UV) light from sun and from man-made UV lamps in our daily life, on health and diseases, also its application in sterilization and treatment. The key words are: reactive oxygen species, DNA damage, UV mutagenicity, skin cancers, polymorphous light eruption, Xeroderma pigmentosum, vitiligo, psoriasis, rheumatoid arthritis, diabetes mellitus, metabolic syndromes, cardiovascular diseases, dermatology, photobiology, photodermatitis, vitamin D synthesis, vitamin D efficiency, water sterilization, blood sterilization, phototherapies, skin tanning and UV dosimeter. The book starts with introduction to UV light and the history of development of UV lamps and its applications. It then moves to describing the interaction of this light with biological components and the production of reactive oxygen species, their roles in cell signaling, cellular defense from foreign invaders, in mutagenesis leading to skin diseases including vitiligo, polymorphous light eruption and various forms of skin cancer. Then it presents the synthesis and importance of UV light and diseases, induced due to the deficiency of vitamin D. Roles of UV light in sterilization, disinfection, phototherapies are depicted in the

next part and finally use and abuse of UV light in tanning salon and the availability and importance of use of UV dosimeter are highlighted. The three main focuses of this book are: - Damage to biological systems by UV light leading to certain skin diseases; most importantly skin cancers. - Importance of UV light in the in vivo synthesis of vitamin D when human bodies are exposed to it. - Diseases caused due to the deficiency of vitamin D and the use of UV lamps in phototherapy and sterilization processes. The editor has considerable experience in publishing medical books and has used it critically selecting the matters which will attract the readers from many areas of medical and non-medical fields. It is hoped that the materials presented in this book will give great benefit and will stimulate both novice and expert researchers in the field. The book gives excellent overviews of the current status of research and pointers to the future research achievements. Clinicians, medical general practitioners, technicians and staff working in UV related industries and especially those working in tanning salon should benefit from the information presented in safe handling of this light.

*Combustion Noise* - Anna Schwarz 2009-06-17  
November, 2008 Anna Schwarz, Johannes Janicka In the last thirty years noise emission has developed into a topic of increasing importance to society and economy. In ?elds such as air, road and rail traf?c, the control of noise emissions and development of associated noise-reduction techno- gies is a central requirement for social acceptance and economical competitiveness. The noise emission of combustion systems is a major part of the task of noise - duction. The following aspects motivate research: • Modern combustion chambers in technical combustion systems with low pol- tion exhausts are 5 - 8 dB louder compared to their predecessors. In the ope- tional state the noise pressure levels achieved can even be 10-15 dB louder. • High capacity torches in the chemical industry are usually placed at ground level because of the reasons of noise emissions instead of being placed at a height suitable for safety and security. • For

airplanes the combustion emissions become a more and more important topic. The combustion instability and noise issues are one major obstacle for the introduction of green technologies as lean fuel combustion and premixed burners in aero-engines. The direct and indirect contribution of combustion noise to the overall core noise is still under discussion. However, it is clear that the core noise besides the fan tone will become an important noise source in future aero-engine designs. To further reduce the jet noise, geared ultra high bypass ratio fans are driven by only a few highly loaded turbine stages.

**In Love** - Ryan Messmore 2017-02-01

This book tells how one couple's lives and love story became swept up into an ancient, beautiful story much larger than themselves. The world of romantic love and sexual ethics looks different when seen through the lens of this narrative. In Love describes their attempt to live out this ancient story's wisdom in modern times.

**Inflammatory Diseases and Copper** - John R. J. Sorenson 2012-12-06

In 1928, it was discovered that copper was essential for normal human metabolism. A decade later, in 1938, it was observed that patients with rheumatoid arthritis exhibited a higher than normal serum copper concentration that returned to normal with remission of this disease. Thirteen years later, it was found that copper complexes were effective in treating arthritic diseases. The first report that copper complexes had antiinflammatory activity in an animal model of inflammation appeared twenty-two years after the discovery of essentiality. In 1976, it was suggested that the active forms of the antiarthritic drugs are their copper complexes formed in vivo. This suggestion has been confirmed and extended in the interim in over 200 recent publications. Individual biomedical scientists from many countries who have published in these areas recently saw a need for a meeting to exchange current research results and discuss the evidence met on the University of Arkansas Medical Sciences campus in Little Rock, Arkansas, August 10-13, 1981. Participants came from Australia, England,

France, Germany, Israel, Italy, The Netherlands, Norway, Poland, Scotland, Sweden, Switzerland, Wales, Zimbabwe, and over twenty of the United States.

**Carpenter** - Peter James McGuire 1984

A History of Polish Theatre - Katarzyna Fazan 2021-12-31

Poland is celebrated internationally for its rich and varied performance traditions and theatre histories. This groundbreaking volume is the first in English to engage with these topics across an ambitious scope, incorporating Staropolska, the Polish-Lithuanian Commonwealth, the Enlightenment and Romanticism within its broad ambit. The book also discusses theatre cultures under socialism, the emergence of canonical practitioners and training methods, the development of dramaturgical forms and stage aesthetics and the political transformations attending the ends of the First and Second World Wars. Subjects of far-reaching transnational attention such as Jerzy Grotowski and Tadeusz Kantor are contextualised alongside theatre makers and practices that have gone largely unrecognized by international readers, while the participation of ethnic minorities in the production of national culture is given fresh attention. The essays in this collection theorise broad historical trends, movements, and case studies that extend the discursive limits of Polish national and cultural identity.

**Topological Persistence in Geometry and Analysis** - Leonid Polterovich 2020-05-11

The theory of persistence modules originated in topological data analysis and became an active area of research in algebraic topology. This book provides a concise and self-contained introduction to persistence modules and focuses on their interactions with pure mathematics, bringing the reader to the cutting edge of current research. In particular, the authors present applications of persistence to symplectic topology, including the geometry of symplectomorphism groups and embedding problems. Furthermore, they discuss topological function theory, which provides new insight into oscillation of functions. The book is accessible to readers with a basic background in algebraic and differential topology.

*HRH* - Elizabeth Holmes 2020-11-17

**\*\*THE INSTANT NEW YORK TIMES BESTSELLER\*\*** Veteran style journalist Elizabeth Holmes expands her popular Instagram series, *So Many Thoughts*, into a nuanced look at the fashion and branding of the four most influential members of the British Royal Family: Queen Elizabeth II; Diana, Princess of Wales; Catherine, The Duchess of Cambridge; and Meghan, The Duchess of Sussex. Kate Middleton and Meghan Markle are global style icons, their every fashion choice

chronicled and celebrated. With all eyes on them, the duchesses select clothes that send a message about their values, interests, and priorities. Their thoughtful sartorial strategies follow in the footsteps of Queen Elizabeth II and Diana, Princess of Wales, two towering figures known for using their personal style to great acclaim. With one section devoted to each woman, *HRH* is a celebration of their stories and their style, pairing hundreds of gorgeous photographs with extensive research. A picture emerges of the British monarchy's evolution and the power of royal fashion, showing there's always more than what meets the eye.

**Excelsior, You Fathead!** - Eugene B. Bergmann  
2006-01-01

Jean Shepherd (1921-1999) master humorist is best known for his creation *EA Christmas Story* the popular movie about the child who wants a BB gun for Christmas and nearly shoots his eye out. What else did Shepherd do? He is considered by many to be the Mark Twain and James Thurber of his day. For many thousands of fans for decades Shep talked on the radio late at night keeping them up way past their bedtimes. He entertained without a script improvising like a jazz musician on any and every subject you can imagine. He invented and remains the master of talk radio. Shepherd perpetrated one of the great literary hoaxes of all time promoting a nonexistent book and author and then brought the book into existence. He wrote 23 short stories for *EA Playboy* four times winning their humor of the year award and also interviewed The Beatles for the magazine. He authored several popular books of humor and satire created several television series and acted in several plays. He is the model for the character played by Jason Robards in the play and movie *EA Thousand Clowns* as well as the inspiration for the Shel Silverstein song made famous by Johnny Cash *A Boy Named Sue*. Readers will learn the significance of innumerable Shepherd words and phrases such as *Excelsior you fathead* and observe his constant confrontations with the America he loved. They will get to know and understand this multitalented genius by peeking behind the wall he built for himself a wall to hide a different and less agreeable persona.

Through interviews with his friends co-workers and creative associates such as musician David Amram cartoonist and playwright Jules Feiffer publisher and broadcaster Paul Krassner and author Norman Mailer the book explains a complex and unique genius of our time.

Shepherd pretty much invented talk radio ... What I got of him was a wonder at the world one man could create. I am as awed now by his achievement as I was then. ä Richard Corliss
