[Global Health Research in an Unequal World](#) - P Wenzel Geissler 2020-10-09

This book is a collection of fictionalised case studies of everyday ethical dilemmas and challenges, encountered in the process of conducting global health research in places where the effects of global, political and economic inequality are particularly evident. It is a training tool to fill the gap between research ethics guidelines, and their implementation 'on the ground'. The case studies, therefore, focus on 'relational' ethics: ethical actions and ideas that emerge through relations with others, rather than in regulations. Explorations in Critical Studies of Advertising - James F. Hamilton
2016-10-26

This volume provides a thoughtful and wide-ranging exploration of approaches to the critical study of advertising. Current and impending practices of advertising have in many ways exceeded the grasp of traditional modes of critique, due at least in part to their being formulated in very different historical conditions. To begin to address this lag, this edited collection explores through critical discussion and application a variety of critical approaches to advertising. Authors address a variety of concrete examples in their chapters, drawing on existing research while presenting new findings where relevant. In order to maintain the relevance of this collection past this particular historical moment, however, chapters do not simply report on empirical work, but develop a theoretical argument.

Funds of Knowledge - Norma Gonzalez 2006-04-21

The concept of "funds of knowledge" is based on a simple premise: people are competent and have knowledge, and their life experiences have given them that knowledge. The claim in this book is that first-hand research experiences with families allow one to document this competence and knowledge, and that such engagement provides many possibilities for positive pedagogical actions. Drawing from both Vygotskian and neo-sociocultural perspectives in designing a methodology that views the everyday practices of language and action as constructing knowledge, the funds of knowledge approach facilitates a systematic and powerful way to represent communities in terms of the resources they possess and how to harness them for classroom teaching. This book accomplishes three objectives: It gives readers the basic methodology and techniques followed in the contributors' funds of knowledge research; it extends the boundaries of what these researchers have done; and it explores the applications to classroom practice that can result from teachers knowing the communities in which they work. In a time when national educational discourses focus on system reform and wholesale replicability across school sites, this book offers a counter-

perspective stating that instruction must be linked to students' lives, and that details of effective pedagogy should be linked to local histories and community contexts. This approach should not be confused with parent participation programs, although that is often a fortuitous consequence of the work described. It is also not an attempt to teach parents "how to do school" although that could certainly be an outcome if the parents so desired. Instead, the funds of knowledge approach attempts to accomplish something that may be even more challenging: to alter the perceptions of working-class or poor communities by viewing their households primarily in terms of their strengths and resources, their defining pedagogical characteristics. *Funds of Knowledge: Theorizing Practices in Households, Communities, and Classrooms* is a critically important volume for all teachers and teachers-to-be, and for researchers and graduate students of language, culture, and education.

Doing Comparative Case Studies - Frances Vavrus 2022-07-07

Comparative Case Studies: New Designs and Directions extends the comparative case study methodology established by Bartlett and Vavrus and employed in many areas of social research, especially in education. This volume unites a diverse, international group of education scholars whose work exemplifies the affordances and constraints of the comparative case study (CCS) approach and offers new theoretical and empirical directions for researchers. In 11 engaging chapters, experts in comparative education, early childhood education, peace education, refugee education, special education, and teacher education discuss their use of the CCS approach to produce new ways of knowing and to address challenges of multi-scalar and multi-sited research. The first section, Conceptualizing Cases and Case Selection, emphasizes the importance of carefully selecting cases during different phases of research while continuously reflecting on how these choices influence the findings. The second section, Balancing Specificity and Generalizability, addresses the challenge of balancing the need for rich, deep data while including multiple sites. The third section, Enabling Processual Analysis across Sites and Scales, demonstrates the fit between the CCS approach and qualitative research that unfolds over time and space. Addressing the Transversal Axis, the fourth section, showcases research with a strong temporal dimension. The final section, New Directions, suggests inspiring and innovative methods. Offering rich methodological examples and provocative discussion questions, this volume will appeal to undergraduate and graduate students in education and research design courses, and to scholars and policymakers in diverse fields seeking to design studies of complex phenomena at different sites and scales.

Qualitative Research Practice - Jane Ritchie 2003-02-19

'An excellent introduction to the theoretical, methodological and practical issues of qualitative research... they deal with issues at all stages in a very direct, clear, systematic and practical manner and thus make the processes involved in qualitative research more transparent' - Nyhedsbrev 'This is a "how to" book on qualitative methods written by people who do qualitative research for a living.... It is likely to become the standard manual on all graduate and undergraduate courses on

qualitative methods' - Professor Robert Walker, School of Sociology and Social Policy, University of Nottingham What exactly is qualitative research? What are the processes involved and what can it deliver as a mode of inquiry? Qualitative research is an exciting blend of scientific investigation and creative discovery. When properly executed, it can bring a unique understanding of people's lives which in turn can be used to deepen our understanding of society. It is a skilled craft used by practitioners and researchers in the 'real world'; this textbook illuminates the possibilities of qualitative research and presents a sequential overview of the process written by those active in the field. Qualitative Research Practice: - Leads the student or researcher through the entire process of qualitative research from beginning to end - moving through design, sampling, data collection, analysis and reporting. - Is written by practising researchers with extensive experience of conducting qualitative research in the arena of social and public policy - contains numerous case studies. - Contains plenty of pedagogical material including chapter summaries, explanation of key concepts, reflective points for seminar discussion and further reading in each chapter - Is structured and applicable for all courses in qualitative research, irrespective of field. Drawn heavily on courses run by the Qualitative Unit at the National Centre for Social Research, this textbook should be recommended reading for students new to qualitative research across the social sciences.

Epistemic Injustice - Miranda Fricker 2007-07-05

In this exploration of new territory between ethics and epistemology, Miranda Fricker argues that there is a distinctively epistemic type of injustice, in which someone is wronged specifically in their capacity as a knower. Justice is one of the oldest and most central themes in philosophy, but in order to reveal the ethical dimension of our epistemic practices the focus must shift to injustice. Fricker adjusts the philosophical lens so that we see through to the negative space that is epistemic injustice. The book explores two different types of epistemic injustice, each driven by a form of prejudice, and from this exploration comes a positive account of two corrective ethical-intellectual virtues.

The characterization of these phenomena casts light on many issues, such as social power, prejudice, virtue, and the genealogy of knowledge, and it proposes a virtue epistemological account of testimony. In this ground-breaking book, the entanglements of reason and social power are traced in a new way, to reveal the different forms of epistemic injustice and their place in the broad pattern of social injustice.

The Refusal of Work - David Frayne 2015-11-15

Paid work is absolutely central to the culture and politics of capitalist societies, yet today's work-centred world is becoming increasingly hostile to the human need for autonomy, spontaneity and community. The grim reality of a society in which some are overworked, whilst others are condemned to intermittent work and unemployment, is progressively more difficult to tolerate. In this thought-provoking book, David Frayne questions the central place of work in mainstream political visions of the future, laying bare the ways in which economic demands colonise our lives and priorities. Drawing on his original research into the lives of people who are actively resisting nine-to-five employment, Frayne asks what motivates these people to disconnect from work, whether or not their resistance is futile, and whether they might have the capacity to inspire an alternative form of development, based on a reduction and social redistribution of work. A crucial dissection of the work-centred nature of modern society and emerging resistance to it, *The Refusal of Work* is a bold call for a more humane and sustainable vision of social progress.

Ethics in Mental Health Research - James M. DuBois 2008

Research holds a key to preventing and effectively treating mental disorders, including ADHD, depression, schizophrenia, and substance abuse. Yet even as research holds out promise, mental health researchers face numerous ethical challenges. Responsible for ensuring participants are able and willing to grant consent, researchers must also constantly protect privacy and confidentiality. But for so many situations, the appropriate decisions are not so clear. An individual with cognitive deficits may have difficulty understanding a research study and granting informed consent, but nevertheless wants to participate. Many studies

gather private information about medical records or illegal behaviors that could lead to emotional, social, or legal harm if shared, yet state laws and institutional review boards may require researchers to breach confidentiality in specific situations. Moreover, mental health consumers and other vulnerable research participants are frequently familiar with historical cases of abuse of human subjects, and may be mistrustful of researchers or fear exploitation. At the same time, researchers are often frustrated when they feel that advocates or institutional review boards erect barriers to research, even while failing to enhance the ethical treatment of participants. Ethical research is rarely simply about avoiding bad activities, and more frequently about how to pursue good research when multiple values and commitments conflict. *Ethics in Mental Health Research* explores how ethical issues arise in mental health research, and offers concrete guidance to researchers who seek to comply with federal regulations while conducting research that is at once ethical and scientifically credible. Case studies used throughout illustrate a variety of situations and effective problem-solving strategies. This book is essential reading for mental health researchers, IRB members, and research advocates.

Youth Work: Histories, Policy and Contexts - Graham Bright 2015-09-10

Youth work is a means of promoting learning, equality and inclusion with young people. It is an incredibly rewarding profession; however, state regulation means that youth work students and practitioners must continuously wrestle with the challenges of contemporary practice in environments that are complex and changing. This book brings together a collection of voices to speak to these concerns. Drawing on the history of the profession, each chapter focuses on a different aspect of policy and practice. Plagiarism, the Internet, and Student Learning - Wendy Sutherland-Smith 2008-04-24

Written for Higher Education educators, managers and policy-makers, Plagiarism, the Internet and Student Learning combines theoretical understandings with a practical model of plagiarism and aims to explain why and how plagiarism developed. It offers a new way to conceptualize plagiarism and provides a framework for professionals dealing with

plagiarism in higher education. Sutherland-Smith presents a model of plagiarism, called the plagiarism continuum, which usefully informs discussion and direction of plagiarism management in most educational settings. The model was developed from a cross-disciplinary examination of plagiarism with a particular focus on understanding how educators and students perceive and respond to issues of plagiarism. The evolution of plagiarism, from its birth in Law, to a global issue, poses challenges to international educators in diverse cultural settings. The case studies included are the voices of educators and students discussing the complexity of plagiarism in policy and practice, as well as the tensions between institutional and individual responses. A review of international studies plus qualitative empirical research on plagiarism, conducted in Australia between 2004-2006, explain why it has emerged as a major issue. The book examines current teaching approaches in light of issues surrounding plagiarism, particularly Internet plagiarism. The model affords insight into ways in which teaching and learning approaches can be enhanced to cope with the ever-changing face of plagiarism. This book challenges Higher Education educators, managers and policy-makers to examine their own beliefs and practices in managing the phenomenon of plagiarism in academic writing.

Folk Devils and Moral Panics - Stanley Cohen 2011

'Richly documented and convincingly presented' -- New Society Mods and Rockers, skinheads, video nasties, designer drugs, bogus asylum seekers and hoodies. Every era has its own moral panics. It was Stanley Cohen's classic account, first published in the early 1970s and regularly revised, that brought the term 'moral panic' into widespread discussion. It is an outstanding investigation of the way in which the media and often those in a position of political power define a condition, or group, as a threat to societal values and interests. Fanned by screaming media headlines, Cohen brilliantly demonstrates how this leads to such groups being marginalised and vilified in the popular imagination, inhibiting rational debate about solutions to the social problems such groups represent. Furthermore, he argues that moral panics go even further by identifying the very fault lines of power in society. Full of sharp insight and analysis, *Folk Devils and Moral Panics* is essential reading for anyone wanting to understand this powerful and enduring phenomenon.

Professor Stanley Cohen is Emeritus Professor of Sociology at the London School of Economics. He received the Sellin-Glueck Award of the American Society of Criminology (1985) and is on the Board of the International Council on Human Rights. He is a member of the British Academy.

Decolonizing Methodologies - Linda Tuhiwai Smith 2016-03-15
'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and tradition as 'regimes of truth.' Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume urgently up-to-date.
