Neuropsychological and Cognitive Processes in Reading - Francis J. Pirozzolo 2013-10-22

Neuropsychological and Cognitive Processes in Reading explores reading and reading disabilities within the context of cognitive psychology and neuropsychology. Emphasis is on the roles of brain mechanisms in reading and reading disturbances. In the areas of perception and cognition, theoretical models of the reading process are used to highlight the various psychological processes involved in the act of skilled reading. Comprised of 12 chapters, this volume begins with an introduction to the fundamental processes of reading, giving particular attention to a psychological theory that builds on two concepts: that the basic processes of reading are few in number, and that they are separable from one another. A useful and testable information-processing model of reading that consists of three separable, fundamental processes - decoding, word meaning, and sentence comprehension - is described. Subsequent chapters deal with some of the external and internal factors involved in reading; a model of disorders of reading comprehension (the alexias); the neuropsychological test performance of brain-damaged and non-brain-damaged dyslexic children; and the problem of subtypes of learning disability. Eye movements and perceptual spans in reading are also discussed, along with reading comprehension and the problem of agrammatism. The final chapter analyzes the factors that influence recovery from alexia. This book will be of interest to neuropsychologists and those engaged in neurolinguistics, psycholinguistics, cognitive psychology, and educational psychology.

TNM Classification of Malignant Tumours - Leslie H. Sobin 2011-08-31

TNM Classification of Malignant Tumours, 7th Edition provides the latest, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this authoritative guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with cancer need to accurately classify tumours for staging, prognosis and treatment. The major alterations addressed in the 7th Edition concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin, and prostate. In addition, there are several entirely new classifications: gastrointestinal carcinoids (neuroendocrine tumours) gastrointestinal stromal tumour upper aerodigestive mucosal melanoma Merkel cell carcinoma uterine sarcomas intrahepatic cholangiocarcinoma adrenal cortical carcinoma. A new approach has also been adopted to separate anatomical stage groupings from prognostic groupings in which other prognostic factors are added to T, N, and M categories. These new prognostic groupings, as well as the traditional anatomical groupings, are presented for oesophageal and prostate carcinomas. Histología y embriología del ser humano - Aldo R. Eynard 2008-06-30

Durante mucho tiempo, la Histología y la Embriología fueron consideradas compartimientos casi estancos. Sin embargo, ¿se puede aprender y enseñar una de las estas disciplinas sin tomar como referencia a la otra?; ¿es posible escribir sobre ellas sin los fundamentos de la Biología Celular?; ¿se pueden estudiar sus interacciones sin conocer la Biología Molecular subyacente?; ¿es factible referirse a la arquitectura del complejo ser humano sin contemplar los millones de años de evolución? Sin duda, en el marco de los paradigmas de aprendizaje actuales de estos campos, la respuesta es no. Esta obra cumple con el propósito

de dar una respuesta pedagógica moderna a las frecuentes dificultades en la enseñanza y el aprendizaje de la Biología Celular, la Histología y la Embriología, mediante una integración armónica de sus contenidos.
