Regionalism in World Politics - Louise L'Estrange Fawcett 1995

This book brings together the many different institutions and ideas to be found under the label of 'regionalism'; it places the revival of regionalism in a broader historical perspective; it asks whether there are common factors behind the revival of regionalism in so many different parts of the world; and it analyzes the cumulative impact of different brands of regionalism on international order. Leading specialists examine recent developments in regional cooperation in different parts of the world. They take a critical look at recent trends towards the new regionalism and regionalization, assessing their origins, their present and future prospects; and their place in the evolving international order. As well as concentrating on specific regions, including Pacific-Asia, the Americas, Europe, and the Middle East, the book looks at theories of regionalism, the balance between regionalization and globalization in the world economy, the relationship between regional organizations and the United Nations, and the relationship between the revival of regionalism and questions of identity and nationalism.

The Dollarization Debate - Dominick Salvatore 2003

Free Trade and Absolute and Comparative Advantage - Reinhard Schumacher 2013

This thesis deals with two theories of international trade: the theory of comparative advantage, which is connected to the name David Ricardo and is dominating current trade theory, and Adam Smith's theory of absolute advantage. Both theories are compared and their assumptions are scrutinised. The former theory is rejected on theoretical and empirical grounds in favour of the latter. On the basis of the theory of absolute advantage, developments of free international trade are examined, whereby the focus is on trade between industrial and underdeveloped countries. The main conclusions are that trade patterns are determined by absolute production cost advantages and that the gap between developed and poor countries is not reduced but rather increased by free trade.

Monetary Unions and Hard Pegs - Volbert Alexander 2004-03-25

Financial services with global reach are becoming ever more important in the conduct and organization of the trade and investment of nations, and currencies that lack international standing lose out in this business. The result of financial development has been destabilizing currency and portfolio substitution — in favour of international currencies and against local ones. This book analyses formal approaches to overcoming monetary divisions within countries and within integrating regions, focusing on the consequences of monetary union for trade among union members and their financial development and stability. The authors discuss hard pegs such as those attempted by the currency board of Argentina, outright dollarization, such as in Ecuador, and multilateral monetary union, as in Europe, the least reversible form of monetary union and the most powerful elixir of financial integration and trade. The political classes and central banks in most countries have been reluctant to admit the market- and technology-driven forces of currency consolidation, much less yield to them. International financial institutions too are still in the habit of proffering advice about national monetary and exchange-rate policies on the assumption that getting rid of both is not even an option. Emerging-market countries, in particular, have to choose between retaining

what independent monetary means they still have — and can safely use in the presence of widespread liability dollarization and currency mismatches — and formally replacing the domestic with an international currency to reduce exposure to debilitating financial crises. In concrete investigations of this choice, this volume shows that monetary union deserves a much more sympathetic hearing.
